

Project Name: Special Interest Group Portal

Project Team: Team Grapes

Document: Tim's feedback

Summarized Notes From Mar 01, 2024 Check-Ins

- If we use images on a website it should have meaning and should make a connection with the website.
- No need to show social media accounts anywhere on the website.
- Customers want only email as a communication channel.
- On a members page we do not have to use communities words because we are building this website for only Humanities and Engineering SIG.
- We must change the filter name from biographical info to research interest on the community page.
- We only need Research, Firstname and Lastname as a filter type on the community page and also the research must be put at the top.
- On the profile page we must disable the post and messages option.
- Don't use the images that have watermarks on it.
- Don't use dummy information instead we have to use SIG members profile data which SIGs presented on the first meeting.
