

Project Name: Special Interest Group Portal

Project Team: Team Grapes

Document: Customer Notes

Summarized Customer Notes From Feb 16, 2024 Check-Ins

- SIGs want website accessibility not limited to only the SIG members. It should be public so they can promote their work, build and expand their community.
- The main focus of the website should be on people, their interest and how to connect with them. Events and papers are not the main focus.
- SIG website doesn't host the papers. The papers should be fetched directly from the CAAE-ACEG website to reduce duplication, work and maintenance.
- Use the words wisely on the SIG website for functions so that the public can easily understand and discover them..
- The About us page on the website should give the information such as new information, interesting things and SIGs publications.
- SIGs don't need a communication channel on the website.
- Focusing on the SIG website for only one group, it should have the members list in scroll bar manner and research interest filters to find the member easily with the same interest..
- For the landing page, it should have more context so that anyone visiting a website can get a clear idea and entice them to remain on the website.
- Team Graps presented the idea of having my community and community page that have multiple groups which entice the customers but for now we must focus only on the Humanity and Engineering group.
- For now, the SIG website has different login credentials than the CEEA-ACEG website.
- The website should be multi device friendly, and will have minimum maintenance and maximum impact.
